

RB-19 Command Line Interface

I want to create a command line interface for the Random Bunny project.

Example Output

The output should follow something like this:

```
$ random-bunny
Title: Example Title
Description: Example description
Upvotes: 247
Permalink: https://reddit.com/r/rabbits/

$ random-bunny -h
Random Bunny v2.1

Fetch a random bunny image from reddit

Options:
  -h: Display help
  -j: Output as JSON
  --subreddit: Choose a specific subreddit (Default: rabbits)
  --sort: Sort by hot, new, top (Default: new)

$ random-bunny -j
{
  "title": "Example Title",
  "description": "Example description",
  "upvotes": 247,
  "permalink": "https://reddot.com/r/rabbits"
}

$ random-bunny --subreddit bunnieswithhats --sort hot
...
```

Stories

- Create basic command line interface
 - Find package to make it easier for options

- Create default output
- Create help menu
- Output as JSON option
- Sort option
 - Happy flow
 - Error handling
- Subreddit option
 - Happy flow
 - Error handling
